

OBJECTIVE : Structure with functions and String Operations

Instructor : Yusuf Evren AYKAÇ

Assistants : Elif GÜL, Yusuf Şevki GÜNAYDIN, Hatice ÇATALOLUK

Use **POINTER** notation instead of **SUBSCRIPT** notation!

1.

A) Write a C program that will **take a string input** and **display** it on the screen. Try entering the sentence first with **%s** and then **%[^\n]s** to see the difference. Also Use **%[^0-9]** then **Display** the sentence.

Example Run(using %s) :

Enter a sentence: esta es una frase.

The sentence is : esta

Example Run(using %[^\n]s) :

Enter a sentence: esta es una frase.

The sentence is : esta es una frase.

Example Run(using %[^0-9]) :

Enter a sentence: there are 12 board markers in my drawer for some reason

The sentence is : there are

Project Name: LG3_1a

File Name: Q1a.cpp

B) Write a function named **myStrLen** that takes a string as input parameter, finds and returns the number of characters in that string. (A string ends with **'\0'** character)

Write a C program that reads several names from the **words.txt** file, finds the length of each name using the **myStrLen** function, and writes the name and its size into a new text file named **result.txt**.

words.txt	Result.txt
Ben	Ben - 3
Evren	Evren - 5
Yetmisuc	Yetmisuc - 8
Yirmiyedi	Yirmiyedi - 9
Elif	Elif - 4
Haliyla	Haliyla - 7
Hatice	Hatice - 6
Yusuf	Yusuf - 5

Project Name: LG3_1b

File Name: Q1b.cpp

2. In a factory the data about 3 departments and 10 workers in each exists. Departments' information are stored as an id and name. Workers has got id, name, age, worked_hour and salary.

- Write a function that gets all data from a file.
- Write a function that calculates the salaries of all employees in all departments.
- Write a function that displays departments and the employees in a given format.

Write a C program that gets 3 departments id and name and it's employees from a file named **employee.txt**. Then program calculates the salaries of all employees in all departments. Employees which are worked until 40 hour gets 2.0 TL for per hour, if an employee worked more than 40 hours gets 5.0 TL per extra hours to their salaries. Then program displays the information as in the example run. **Notice: You must use nested structure!!**

Employee.txt

```
61 HUMAN RESOURCE MANAGEMENT
111 Ali 22 50
222 Ayse 25 45
333 Hasan 26 57
444 Murat 27 34
555 Gamze 23 23
